Description When beanstalk is unresponsive (see http://tracker.ceph.com/issues/12031), it would be nice to see logs that may explain the source of the problem. Edit /etc/init.d/beanstalkd on teuthology, uncomment <pre>#LOGDIR=/var/log/beanstalkd # Log directory to use</pre>

I set the following:

```
$ grep LOG /etc/init.d/beanstalkd
LOGDIR=/var/log/beanstalkd # Log directory to use
LOGFILE=$LOGDIR/$NAME.log # Server logfile
```

Then created /var/log/beanstalkd/ and restarted; days later and no logs :-/
