Severity:	3 - minor		

Description

It's too much noise to notify the user when an action was successful. It's ok to display a notification in case of an error, but nothing more.

The screenshot shows the Ceph dashboard interface. At the top, there is a navigation bar with 'Dashboard', 'Cluster', 'Pools', 'Block', 'Filesystems', and 'Object Gateway'. A green notification banner at the top right says 'Created pool 'safsfdsd'' with a checkmark and a close button. Below the navigation bar, the 'Pools' section is active, displaying a table of pools. The table has columns for Name, Type, Applications, Placement Groups, Replica Size, Last Change, Erasure Coded Profile, and Crush Ruleset. The first row shows a pool named '.rgw.root' with Type 'replicated', Applications 'rgw', Placement Groups '8', Replica Size '3', Last Change '16', Erasure Coded Profile, and Crush Ruleset 'replicated_rule'.

History

Will we track these event notifications in some kind of log (for audit purposes), i.e. whether it successful or had an error?

#2 - 08/03/2018 07:56 AM - Stephan Müller

We had this discussion before and came to the conclusion to show successful notifications as most other web based software is doing that. (Redmine too)
