

rgw - Feature #3454

Support temp URLs for Swift API

11/07/2012 10:58 AM - Aaron Schulz

Description			
See http://docs.rackspace.com/files/api/v1/cf-devguide/content/TempURL-d1a4450.html			
Since the configuration of authentication and users is different in rgw and swift, we end up with no way to set X-Account-Meta-Temp-Url-Key and thus no way to make temp urls. It would be nice if a setting in the rados user config allowed setting the shared secret key (in place of a POST request with X-Account-Meta-Temp-Url-Key).			
Temp urls are useful for both giving to users and passing to programs (like avconv) that don't actually support sending auth headers.

Revision 56e4015c - 01/09/2014 10:28 PM - Yehuda Sadeh

rgw: handle temp url key authorization

Fixes: #3454

Implement auth handling code that checks temp url signature and expiration. The key that is used for the signature is the bucket owner's temp url key.

Bump .. would really love to see this feature in there.

We are deploying Cloud Foundry v2 into Openstack, and want to use RadosGW to provide the Swift interface, which will enable us to implement this: https://github.com/anynines/cf-docs/blob/10a6b850b2cfb8fa36d386de0d6c3b8a8fda77b8/source/docs/running/deploying-cf/openstack/using_swift_blockstore.html.md

Samen problem as Ryan
so if this could be picked up that would be great

#6 - 11/13/2013 06:06 AM - Wayne E Seguin

I have just run into this as well.

Is there a timeline for this?

merged upstream, commit:c60ae09b389c808735415553e31c871cfa42f776. I opened a new task ([#7156](#)) for creating a test for this feature.

This should be documented somewhere too, at least in the table at <http://ceph.com/docs/master/radosgw/swift/>
