

Calamari - Feature #11366

ceph.py assumed no '-' in ceph cluster name

Description

https://github.com/ceph/calamari/blob/master/salt/srv/salt/_modules/ceph.py#L517

For a cluster named with '-' in it, above code can't parse cluster_name, service_type, service_id from admin socket, that results Calamari not being able to find the cluster as it should.

AFAIK, '-' is a legi character in ceph naming. So this should be fixed in Calamari.

History

#1 - 04/17/2015 05:20 PM - Loïc Dachary

- Tracker changed from Bug to Feature

I suppose it's to be expected since you found that <http://docs.ceph.com/docs/master/rados/configuration/ceph-conf/> reads "Cluster names must consist of letters a-z and digits 0-9 only".

#2 - 04/21/2015 02:33 PM - Christina Meno

- Category set to Backend (services)

- Target version set to 1.4 backlog

Thank you for the report.
