Description

From an IRC conversation with Greg Farnum: The ceph-objectstore-tool utility is a tool for interacting with the OSD objectstore. It's good for repairing clusters that have broken in a variety of ways. We expect users to need to run it sometimes (as well as support). It is like an fsck and repair tool for the OSD's store.

From this I conclude that we should move ceph-objectstore-tool to the main "ceph" package so that it is present on all OSDs. (and as far as ticket [#10587](#) goes, ceph-objectstore-tool should eventually move to the new "ceph-osd" subpackage).

(It would also be great to have a ceph-objectstore-tool man page :)
