```

I collected the full log and stored it at "noisy.ceph.widodh.nl:/var/log/remote", logfile is named "osd.17.crash.log", the core-dump can be found at "/var/log/remote/core-dump" and is called "core.atom4.3484"

The core is also still present on atom4.

The version I'm running is [d2b7e291f21928f9f0a3e23fb32c94c9cbbc8984](#)

History

#1 - 06/27/2011 10:47 PM - Sage Weil

- Target version set to v0.31

#2 - 06/28/2011 10:43 AM - Sage Weil

- Status changed from New to Can't reproduce

It looks like the cluster has been rebuilt since then? Epoch 25743 (that it couldn't get) is >> the current 912. Or there is a problem with the generate_past_intervals... Unfortunately the core file no longer matches the installed binary either. Sorry I took so long to get to this.. the trail has gone cold!

#3 - 06/28/2011 10:58 AM - Wido den Hollander

Oh yes, I had to rebuild since I screwed up my single monitor...
