Description	
Description of problem:	
User would like a command/script to manually remove a disk, and include in official documentation a manual procedure to set individual disk to zero-weight and pull. It is understood there is a way to do this already, what is desired is simple UX via a single command.	
Too much understanding needed on part of user to pull a disk out of the cluster. this should be "something a person paid \$7 an hour can do", without knowing what's happening underneath, says user.

cephx key
crush heirarchy
osd rm

#4 - 07/18/2017 08:24 PM - Josh Durgin

- Status changed from New to Resolved

The 'ceph osd purge' command in luminous does this.
