

Calamari - Bug #12080

calamari crush location needs to deal with configurable cephx keyring location

06/18/2015 09:26 PM - Christina Meno

Description			
21:12:03 gmeno off_topic: you wanted to know where this was https://github.com/ceph/calamari/blob/master/salt/srv/salt/base/calamari-crush-location.py			
21:12:15 dmick ah right			
21:12:41 dmick oh lookie there, try the osd key first explicitly, then try the admin key			
21:13:27 gmeno yep			
21:13:39 dmick you realize, of course, that those keyring paths are configurable, and you really ought to be asking ceph where they are			
21:13:48 dmick which of course requires you to have an admin key, probably :)			
21:14:00 dmick sigh			
21:14:19 dmick actually I wonder if that's true; maybe ceph-conf doesn't need keys			
21:14:28 gmeno hah that is something I should have guessed, convention is an outdated concept in linux			
21:15:43 dmick ceph-conf has a hidden switch (isn't that cool?) that actually asks rather than just parsing config files			
21:15:46 dmick so it gets defaults too			
21:15:54 dmick --show-config-value			
21:16:28 dmick \$ ceph-conf --name osd.0 --show-config-value 'keyring'			
21:16:28 dmick /var/lib/ceph/osd/ceph-0/keyring			
21:16:50 dmick \$ ceph-conf --name mon.a --show-config-value 'keyring'			
21:16:50 dmick /etc/ceph/ceph.mon.a.keyring,/etc/ceph/ceph.keyring,/etc/ceph/keyring,/etc/ceph/keyring.bin			
21:17:04 dmick and yay it doesn't appear to need a key itself
