Description	
I think this is probably a bug / oversight. We realized this because of #12668

teuthology.orchestra.opsys seems to be preferring the python method of finding out about the node instead of lsb_release. Python doesn't know about debian codenames, but lsb_release does. We'll need to make an exception in this codepath for debian to use lsb_release instead.

```
ubuntu@vpm059:~$ python -c 'import platform; print platform.linux_distribution()'
('debian', '7.1', '')
ubuntu@vpm059:~$ sudo lsb_release -a
No LSB modules are available.
Distributor ID: Debian
Description:    Debian GNU/Linux 7.1 (wheezy)
Release:        7.1
Codename:       wheezy
```
