Description

ceph/qa/workunit/rbd/qemu-iotests contains the following line:

git clone git://apt-mirror.front.sepia.ceph.com/qemu.git

This works on sepia but fails in the octo lab.

We should probably be using the upstream git

History

#1 - 10/09/2015 01:39 AM - Warren Usui

I believe that I should be using http://ceph.com/git/qemu.git but I can't get this to work.

On vpm159.front.sepia.ceph.com and magna002.ceph.redhat.com, I get:

<p>
Cloning into 'qemu'...
fatal: unable to access 'https://git.ceph.com/qemu.git/': server certificate verification failed. CAfile: /etc/ssl/certs/ca-certificates.crt CRLfile: none
</p>

#2 - 10/09/2015 01:42 AM - Warren Usui

I believe that I should be using http://ceph.com/git/qemu.git but I can't get this to work.

On vpm159.front.sepia.ceph.com and magna002.ceph.redhat.com, I get:

Cloning into 'qemu'...
fatal: unable to access 'https://git.ceph.com/qemu.git/': server certificate verification failed. CAfile: /etc/ssl/certs/ca-certificates.crt CRLfile: none

On my own machine, I get:

Cloning into 'qemu'...
fatal: unable to connect to ceph.com:
ceph.com[0: 173.236.248.54]: errno=Connection refused
ceph.com[1: 2607:f298:6050:51f3:f816:3eff:fe62:31d3]: errno=Network is unreachable

on magna038.ceph.redhat.com, I get:

Cloning into 'qemu'...
fatal: repository 'http://ceph.com/git/qemu.git/' not found

So i am not sure if this is the right place to be looking.
