Regression:	No	Pull request ID:	
Severity:	3 - minor	Crash signature:	
Description			
<p>While my cluster was in a degraded state due to a disk failure at random 2 out of my 3 monitors crashed.</p> <p>I really have no idea what was going on that particular moment since i was busy with replacing the failed drive.</p> <p>My mon0 and mon2 crashed.</p> <p>The backtrace and log was the same on mon0 and mon2. For the record i also added the log of mon1, which gives some information about the state of my cluster.</p> <p>Both mon0 and mon2 crashed at the same time: 14:09</p> <p>Haven't got any more information to go on</p>			

History

#1 - 06/08/2010 09:38 AM - Sage Weil

- Status changed from New to In Progress
- Assignee set to Sage Weil
- Target version set to v0.21

This was due to [29a42efe2e4c789092f59b98b29632bdc4b88a80](#), which made a protocol change. I'll fix it up today to behave with a mix of old and new versions. In the meantime, just restart all your monitors with the new code and you should be fine.

#2 - 06/08/2010 04:29 PM - Sage Weil

- Status changed from In Progress to Resolved
