Backport:	ceph-qa-suite:
Regression: No	Pull request ID:
Severity: 3 - minor	Crash signature:
Description we should use a github mirror for anything on github. maybe we can/should piggyback off whatever carl set up.	

History

#1 - 01/17/2012 11:25 AM - Sage Weil

- Status changed from New to 7

I set up github mirrors for ceph.git, ceph-qa-chef.git, and s3-tests.git. They are at ceph.newdream.net/git, and updated via a cronjob for the sage user at ~/update_git_mirrors.sh every 15 minutes

```
#!/bin/sh

cd /git
for f in ceph.git ceph-qa-chef.git s3-tests.git
do
    test -d $f && ( cd $f && git fetch && git update-server-info )
done
```

Let's see if we see and other similar failures during the nightlies.

#2 - 01/17/2012 11:40 AM - Greg Farnum

Is this going to be okay if the update hangs in the middle and then qa clones the repository?

#3 - 01/22/2012 02:55 PM - Sage Weil

- Status changed from 7 to Resolved

#4 - 01/23/2012 03:58 PM - Anonymous

Git updates are atomic, so nothing will fail just because an update is in progress.

However, nothing here guarantees that the mirror will keep updating, either. "git fetch" from github sometimes hangs indefinitely.
