<b>Severity:</b>	3 - minor	<b>Pull request ID:</b>	
<b>Description</b>			
I wrote a trivial script to look for missing commands in tests ( <a href="https://github.com/ceph/ceph/pull/15675/commits/3aad0f89d527da2d3c995945453276dc7366c954">https://github.com/ceph/ceph/pull/15675/commits/3aad0f89d527da2d3c995945453276dc7366c954</a> ) and it popped up several in RADOS:			
cpu_profiler auth rm mon rm osd cluster_snap (although this one's disabled anyway) osd reweightn osd utilization osd tier rm perf histogram dump debug dump_missing reset_pg_recovery_stats			
These don't have even the most trivial invocation present!
