<b>Severity:</b> 3 - minor	<b>Crash signature:</b>
<b>Reviewed:</b>	

**Description**

Use tell injectargs command to adjust log level of osd, get the following error:

```
~# ceph tell osd.1 injectargs --debug_osd 10 --debug_journal  
~# Error ENXIO: osd down
```

lost arguments will result in daemon exit, the same exception in MON.
