**Description**

I would like to have a service that wraps a task around a 'http' request and returns an observable like 'http' does.

This way it would be easy to use task without having to use the same code and mostly useless imports (only used for Task wrapping) over and over again.

## History

**#1 - 05/15/2018 09:35 AM - Ricardo Marques**

*- Tracker changed from Feature to Cleanup*

**#2 - 05/30/2018 01:27 PM - Ricardo Marques**

*- Status changed from New to Fix Under Review*

*- Assignee changed from Lenz Grimmer to Stephan Müller*
