History

#1 - 03/07/2019 11:21 PM - Patrick Donnelly

- Target version changed from v14.0.0 to v15.0.0

#2 - 05/22/2019 11:33 AM - Patrick Donnelly

- Assignee changed from Zheng Yan to Jeff Layton

- Priority changed from High to Normal

- Start date deleted (06/08/2018)

#3 - 05/31/2019 10:28 PM - Jeff Layton

I've spent the last couple of days working on this. The btime piece happens to be pretty simple, but it shares a feature bit with the addr2 feature, which (subtly) changes the encoding of entity_addr_t's in the protocol. addr2 seems to be undocumented for the most part, so I'm having to attempt to reverse engineer the userland code, and that is proving difficult, especially since there are significant differences between the kernel and the userland code here.

#4 - 07/22/2019 12:21 PM - Jeff Layton

- Status changed from New to Resolved

#5 - 07/22/2019 12:22 PM - Jeff Layton

Patches merged for v5.3.
