Regression:	No	**Crash signature (v1):**	
Severity:	3 - minor	**Crash signature (v2):**	
Reviewed:			

Description

Using the documented commands to import a signed cert or key e.g.

```
ceph config-key set mgr mgr/dashboard/crt -i dashboard.crt
```

produces the following warning:

```
WARNING: it looks like you might be trying to set a ceph-mgr module configuration key.  Since Ceph
 13.0.0 (Mimic), mgr module configuration is done with `config set`, and new values set using `con
fig-key set` will be ignored.
```

The configuration does actually work so the warning is wrong.

Thanks for reporting this, Stuart.

@John, this message originates from the Mgr directly. Any thoughts?
I'm fine with adding a note to the Dashboard documentation in Mimic to ignore this warning.
Thanks to [#24651](#) this should no longer be an issue in Nautilus...

#2 - 06/29/2018 10:31 AM - Anonymous

I've also noticed a mistake in the commands given on this page http://docs.ceph.com/docs/mimic/mgr/dashboard/#ssl-tls-support

```
$ ceph config-key set mgr mgr/dashboard/crt -i dashboard.crt
  $ ceph config-key set mgr mgr/dashboard/key -i dashboard.key
```

They should be:

```
$ ceph config-key set mgr/dashboard/crt -i dashboard.crt
  $ ceph config-key set mgr/dashboard/key -i dashboard.key
```

#3 - 06/29/2018 10:33 AM - John Spray

Oops, yeah - this message was added before we realised that some code would still use "config-key set" for the -i option.

Like you say, this will not be an issue in nautilus, but it's pretty easy to fix it in Mimic to not issue this warning for the dashboard, so I'll open a PR to do that.

I can confirm this issue is still true, with the exact same warning text given today (CentOS 7 RPM v14.2), and remains a problem with both the nautilus and master versions of the documentation still recommending the same config-key command.

http://docs.ceph.com/docs/nautilus/mgr/dashboard/#dashboard-ssl-tls-support
http://docs.ceph.com/docs/master/mgr/dashboard/#dashboard-ssl-tls-support

#9 - 04/05/2019 10:02 AM - Ricardo Dias

The fix developed by John was only applied to the Mimic release, therefore in Nautilus we have again the same warning when "ceph config-key set ..." is used.

I will open a new ticket and respective PR to fix this by adding two new commands to the dashboard to upload the SSL certificate and key.
