Description

I've seen several ceph -s reports lately where the first line on the PGs doesn't match the output of the PG line. My guess is we're somehow caching ceph health status improperly?

```
root@ha2:~# ceph -s
  health HEALTH_WARN 400 pgs peering; 185 pgs stuck inactive; 395 pgs stuck unclean
  monmap e1: 3 mons at {0=192.168.3.11:6789/0,1=192.168.3.12:6789/0,2=192.168.1.64:6789/0}, elect
ion epoch 118, quorum 0,1,2 0,1,2
  osdmap e1451: 2 osds: 2 up, 2 in
  pgmap v369519: 400 pgs: 400 peering; 27776 MB data, 56799 MB used, 4409 GB / 4464 GB avail
  mdsmap e240: 1/1/1 up {0=2=up:active}, 2 up:standby
```

- Status changed from New to Rejected

i don't think theres' anything wrong here.. the "stuck" stuff is based on times they changed away from active or clean, and the 400 number matches...
