#### Description

```
$ aws s3api list-buckets --endpoint=http://localhost:8000
```

```
{
  "Owner": {
    "DisplayName": "tester1",
    "ID": "s3test1"
  },
  "Buckets": []
}
```

```
(aws) [abhishekl@d18:~/spells/pyspells/s3]$
```

```
aws s3api put-bucket-versioning --bucket bucket1 --versioning-configuration Status=Enabled --endpo
int=http://localhost:8000
```

```
(aws) [abhishekl@d18:~/spells/pyspells/s3]$
```

```
aws s3api list-buckets --endpoint=http://localhost:8000
```

```
{
  "Owner": {
    "DisplayName": "tester1",
    "ID": "s3test1"
  },
  "Buckets": []
}
```

We also unfortunately create a bucket instance in the cluster which shouldn't happen
