Description

This line in conftest.py:

```
if ceph_dev_branch in ['luminous', 'mimic']:
    num_osd_ports = 2
```

depends on the name of the branch, but it should be less strict, and use something like:

```
if 'luminous' in ceph_dev_branch or 'mimic' in ceph_dev_branch:
    num_osd_ports = 2
```

Because sometimes tests might be triggered with a special branch. Yuri does this to test its integration branches for example.
