Description

When firstly do `do_cmake.sh`, it will create a `ceph.conf.in` build dir.
plugin dir = lib
erasure code dir = lib
When do `../src/vstart.sh -n`, it print the following message:

```
ceph-mgr dashboard not built - disabling.  
global_init: error reading config file.  
global_init: error reading config file.  
global_init: error reading config file.  
global_init: error reading config file.  
global_init: error reading config file.  
dirname: missing operand  
Try 'dirname --help' for more information.
```

From debug, code `"asok_dir=`dirname $($CEPH_BIN/ceph-conf -c $conf_fn --show-config-value admin_socket)`"` cause erro and make `vstart.sh` return.
So i simple code: `"/bin/ceph-conf -c ceph.conf --show-config-value admin_socket"`
`global_init: error reading config file.`

By git bisect, i found commit `b1289290247fcd724c9f794716176089342f1110` cause this bug.

BTY: if remove `ceph.conf`, no problem occur. I think in `ceph.conf` no infos about `admin_socket` which cause `dirname` with null. If `ceph.conf` contain `admin_socket`, this bug not occur.
