The openSUSE Build Service implements a packaging check that encourages packagers to start the package summary with a capital letter. Quoting from [https://en.opensuse.org/openSUSE:Packaging_checks](https://en.opensuse.org/openSUSE:Packaging_checks) summary-not-capitalized

Package summaries should start with a capital letter, but should not end with a dot (.)

When building ceph in the OBS, we see in the build log:

```
[16139s] ceph-mgr-diskprediction-cloud.noarch: E: summary-not-capitalized (Badness: 20) C ceph-mgr
diskprediction_cloud plugin
[16139s] ceph-mgr-diskprediction-local.noarch: E: summary-not-capitalized (Badness: 20) C ceph-mgr
diskprediction_local plugin
[16139s] ceph-mgr-rook.noarch: E: summary-not-capitalized (Badness: 20) C ceph-mgr rook plugin
[16139s] ceph-mgr-ssh.noarch: E: summary-not-capitalized (Badness: 20) C ceph-mgr ssh module
[16139s] Summary doesn't begin with a capital letter.
```

Also, though there is no explicit check for this, it seems prudent for the summary to be more than a mere repetition of the package name.
