### Description

When we install google-chrome-stable on the system it would install google-chrome-stable-76.0.3809.87-1.x86_64
There's also a related upstream issue: https://github.com/angular/webdriver-manager/issues/404
and a PR to fix this has been merged already: https://github.com/angular/webdriver-manager/pull/405 (webdriver-manager version bump to 12.1.6)
but we're still facing this issue (seems like protractor needs to be updated upstream due to https://github.com/angular/webdriver-manager/pull/405,
see: https://github.com/angular/protractor/issues/5289 and https://github.com/DSpace/dspace-angular/issues/445)

What we have in our package-lock.json:
"webdriver-manager": "^12.0.6"

Tried to bump the protractor version to 6.0.0 (since it's no longer beta) https://github.com/ceph/ceph/pull/29426
But this would fail with a different error:

```
Cannot automatically find webdriver-manager to update.
Update webdriver-manager manually and run 'ng e2e --no-webdriver-update' instead.
Error: Cannot automatically find webdriver-manager to update.
Update webdriver-manager manually and run 'ng e2e --no-webdriver-update' instead.
```

Seems to be related to https://github.com/angular/protractor/issues/5209

Some more output from Jenkins:
npm list webdriver-manager:
ceph-dashboard@0.0.0 /home/jenkins-build/build/workspace/ceph-dashboard-pull-requests/src/pybind/mgr/dashboard/frontend
└─┬ protractor@5.4.2
  └── webdriver-manager@12.1.1

while "npm info webdriver-manager" points to the tarball webdriver-manager-12.1.6.tgz
