Description	
The words, the words of the developer: ""	
When we want to specify the bucket's placement rule during CreateBucket, we should fill the "BucketLocation" parameter with {API_NAME:PLACEMENT_RULE}.	
Currently, there are two issues in default zonegroup which impact the processing of CreateBucket with BucketLocation parameter.	
The api_name in default zonegroup is empty ("")	
Because there is not a default realm, the has_zonegroup_api always returns false when create bucket with the BucketLocation parameter under default zonegroup, which always leads to the CreateBucket request failed.	
This PR fixes the above two issues. ""

Found the master PR. It's <https://github.com/ceph/ceph/pull/22312> - the fix went in before the nautilus 14.2.0 release.

Populated the "Pull request ID" and "Backport" fields accordingly, and cross-lined Matt's luminous backport PR with the backport tracker issue.
