Description	
<p>We encountered a problem when using elasticsearch synchronization. The bucket with custom placement failed to be synced to the target zone. The target zone tries to create a bucket instance based on the placement name. But the target zone does have the placement. The logs as following:</p>	
<pre>meta sync: ERROR: can't store key: bucket.instance: * data sync: ERROR: failed to fetch bucket instance info for * ERROR: select_bucket_placement() returned -22</pre>
