<b>Description</b> we open both 8080 and 8443 for dashboard even when the default is https. We should probably do one or the other, not both.	
<b>Related issues:</b> Related to Orchestrator - Feature #44601: cephadm: Mix of hosts: with and wit... <b>New</b> Related to Orchestrator - Feature #44606: cephadm: RGW firewall + static port <b>New</b>

I'm inclined to just open both, because the dashboard might move between ssl and not ssl. otherwise we need to make the dashboard port as a dependency so that the container is reconfigured..

also note that deploy knows how to open firewall ports, but we never close them again.

##### #3 - 03/20/2020 06:28 PM - Sebastian Wagner

yeah, I also don't like to create a new dependency from the dashboard to cephadm

##### #4 - 03/26/2020 08:31 PM - Sebastian Wagner

- Priority changed from Normal to Low

##### #5 - 05/22/2020 07:42 AM - Juan Miguel Olmo Martínez

User must be able to decide what ports to use (both http/https).

##### #6 - 05/27/2020 12:29 PM - Sebastian Wagner

for this, we'll need control and information about the ports all the daemons use. Especially if they're configurable, like the dashboard.

- the monitoring services have a dedicated port
- RGW has a port
- MGR has a port

We need a general way of setting the firewall based on the ports configured by the services.
