Orchestrator - Feature #50061

cephadm: automatically redeploy daemons if user changes which container to use

03/30/2021 07:09 PM - Adam King

Backport:	pacific	**Pull request ID:**	40507

Description

If a user changes the image to use for a monitoring stack daemon using 'ceph config set mgr mgr/cephadm/container_image_<daemon_type>' as documented here https://docs.ceph.com/en/latest/cephadm/monitoring/#using-custom-images the daemon will remain on the old image until the user redeploys it themselves. We could just check if this image differs from the one the running daemon is using and redeploy if that's the case.
