Description

The current documented command at <https://docs.ceph.com/en/latest/cephadm/troubleshooting/#per-service-and-per-daemon-events> is

```
ceph orch ceph --service-type mds --daemon-id=hostname.ppdhsz --format yaml
```

I'm pretty sure it was meant to be "ceph orch ps" with the "--service-name" arg instead of service-type
