Description

The cephadm now has several meaningful labels like `_admin`, `_no_schedule` etc. From the dashboard side it doesn't make sense to show them along with the labels. The `_no_schedule` is an option rather than a label IMHO. That option removes the services from the host and deploys it on the next available host. Also in the case of adding a host with `_no_schedule` label, the services wont get deployed on that host. Thus the `_no_schedule` can be a setting/option rather than a label.
