Description	
<p>I added a host using the orch add host command then removed using the orch rm host command, it showed me this error, https://pastebin.com/ib3sUHxz. But the host gets removed from the list.</p> <p>After this, I can't add the same host back. But I can add different hosts. Although removing them shows this same error and make that host not addable.</p> <pre>{"prefix": "orch host rm", "hostname": "ceph-node-01.cephlab.com", "targ..."}</pre> <pre>mgr handle_command module 'orchestrator' command handler threw exception: Non-thread-safe operation invoked on an event loop other than the current one</pre> <pre>mgr.server reply reply (22) Invalid argument Traceback (most recent call last): File "/usr/share/ceph/mgr/mgr_module.py", line 1564, in _handle_command return self.handle_command(inbuf, cmd) File "/usr/share/ceph/mgr/orchestrator/_interface.py", line 167, in handle_command return dispatch[cmd['prefix']].call(self, cmd, inbuf) File "/usr/share/ceph/mgr/mgr_module.py", line 415, in call return self.func(mgr, **kwargs) File "/usr/share/ceph/mgr/orchestrator/_interface.py", line 107, in <lambda> wrapper_copy = lambda *l_args, **l_kwargs: wrapper(*l_args, **l_kwargs) # noqa: E731 File "/usr/share/ceph/mgr/orchestrator/_interface.py", line 96, in wrapper return func(*args, **kwargs) File "/usr/share/ceph/mgr/orchestrator/module.py", line 352, in _remove_host raise_if_exception(completion) File "/usr/share/ceph/mgr/orchestrator/_interface.py", line 224, in raise_if_exception raise e RuntimeError: Non-thread-safe operation invoked on an event loop other than the current one</pre>
