<b>Description</b>	
Looks like there is a newer version of Qemu from RHEL, which has some security fixes: <a href="ftp://ftp.redhat.com/pub/redhat/linux/enterprise/6Server/en/os/SRPMS/qemu-kvm-0.12.1.2-2.355.el6_4.7.src.rpm">ftp://ftp.redhat.com/pub/redhat/linux/enterprise/6Server/en/os/SRPMS/qemu-kvm-0.12.1.2-2.355.el6_4.7.src.rpm</a> Can you please compile this with RBD enabled and put in ceph-extras, replacing the one that is there.

Any update on this ? the qemu-kvm version you distribute is 6 month old.  
The cleaning of async vs not async package has not been done yet.

Do we have an idea on the timeline ?
