Regression:	No		**Crash signature (v1):**	
Severity:	3 - minor		**Crash signature (v2):**	

Description

When pool modification request is sent with name(unmodified) and replica(modified), 409 error is thrown with message "Pool with name test2 already exists"

Steps to reproduce from the UI.
1. Create a pool with name 'test2'
2. Wait for the pool to appear in the pool list screen
3. Click on edit pool
4. Change the pool name to 'test1' then revert to 'test2'
5. Increase the replica count
6. Click on Save button
7. An error will be thrown in the message box (which not readable at the moment, refer[1])
8. If the developer tool is enable in the browser, the error message can be seen as "Pool with name test2 already exists" with 409 status code

Step-5 can be optional while reproducing this error.

Associated revisions

Revision 8152e015 - 11/05/2014 01:12 AM - Gregory Meno

rest-api: change name validation on update and tests for same

This allows name to be present on an update, and still rejects updating
a pool to have the same name as another pool
