Description	
<p>It would be really useful when writing certain kinds of tests (eg, for scrubbing) to be able to know that a particular dentry definitely is or is not in the cache. It's fairly easy to get things in the cache, but almost impossible to know you've gotten them out.</p> <p>Implement code that will revoke any client capabilities on a dentry (or, for a folder, any dentries in its hierarchy!) and then dump it out of the MDS cache.</p>
